

# FAQ's

## What are Dp4™ Skin Needling treatments?

The Dp4™ from Dp Derm is the breakthrough of the decade, utilizing the most advanced needle cartridge innovation to vertically pierce the skin. The Dp4™ glides over the skin creating millions of fine fractional channels up to 104% faster than other microneedling devices. These channels can carry up to 80% more topical nutrients deeper into the skin. In turn, the body responds by triggering a natural process of repair. The result is an **increased** production of **collagen** and **elastin**, **resurfacing**, **retexturizing** and overall skin renewal anywhere on the body, from hard to reach areas such as around the eyes, eyelids, earlobes, neck, lips, nose, to larger areas of neck and décolleté, stomach and legs for stretch mark treatments.

The Dp4™ is the most advanced microneedling device on the market. Dp4™ Skin Needling treatments are faster, safer, and produce optimal results.

## Is the treatment painful?

Traditional dermal rolling techniques proved to be a bloody and painful treatment, requiring the application of topical anesthetic cream (TLA) prior to each session. A progression was seen with 3MD™, which caused less epidermal (skin) damage, and reduced levels of pain and discomfort for safer, more effective microneedling treatments. Today with the Dp4™ there is **no comparison** - this is the **most comfortable**, virtually pain-free microneedling treatment available. Dp4™ Skin Needling treatments are so comfortable, there is no need for any TLA. Just lay back and enjoy stunning results.

## How should I prepare my skin for a Dp4™ treatment?

As the original trusted global leader in microneedling, DermapenWorld™ has collaborated with leading research and development laboratories and clinical experts to create **Dp Dermaceuticals™**, the world's first meso-infusion skincare range exclusively **designed for microneedling procedures**. These active meso-glide combinations constitute protocols endorsed by thousands of practitioners around the globe for safe infusion into the skin during skin needling procedures.

For optimal results, an appropriate homecare regime of Dp Dermaceuticals™ should be determined by your clinician to encourage the skin to prepare, strengthen and fortify (especially for thin or delicate skin areas). Continue to use Dp Dermaceuticals™ for a period of 2-3 weeks before and after the Skin Needling treatments. The Dp Dermaceuticals™ range is also suitable for ongoing homecare, a medical grade skincare line with powerful "actives" for anti-aging and corrective skincare.

The range features cleansers, an exfoliant, moisturizers, treatment creams, a collection of specialized masks, as well as medicated breathable camouflage with SPF - Cover Recover™ - which is designed as an everyday anti-aging makeup & post-treatment coverage and recovery balm.

## How many treatments are recommended for rejuvenation, acne scarring and stretch marks? (General guide)

Rejuvenation*:	3-6 treatments	6-8 weeks apart
Acne scarring:	4-6 treatments	6-8 weeks apart
Stretch marks:	4-8 treatments	6-8 weeks apart
Pigmentation:	4-6 treatments	2-4 weeks apart

\*Superficial treatments may be recommended at 4 weekly intervals

## How soon after filler/muscle relaxant injections can I have a Dp4™ treatment?

While there is no clinical evidence that microneedling treatments counteract with any particular injectables, it is important to let your clinician know if you have had an injectable treatment, or are planning one in the near future. **Your clinician will be able to advise you** on when to schedule your treatment appropriately.

## How long should it take before I see results?

Typically, you will see results after the first treatment. Lasting and more significant results will become visible after 3 to 6 treatments (spaced 2-8 weeks apart). The condition of your **skin will continue to improve** over the next 6-12 months after a course of treatments, especially when combined with the recommended Dp Dermaceuticals aftercare regime.

## Is there any downtime after treatments?

Generally no, but you may experience facial redness for 12-48 hours after the treatment. Most people are able to return to normal daily activities immediately after the treatment. Application of Dp Dermaceuticals™ **Cover Recover™** will seal and heal the skin and cover any redness for an **immediate return** to work.

Make an appointment with your  
Authorized Treatment Provider today!

Check with your clinician before proceeding with a skin needling procedure if you are: pregnant, using blood thinners, such as Warfarin, or if you are susceptible to keloiding skin. Do not treat over keloid scars, active problematic skin, such as severe solar keratosis, raised moles/warts, eczema or psoriasis. The treatment provider is to be aware this service may have local laws that apply to the operation and use of microneedling devices. Dp Derm LLC or it's representatives hold no responsibility for treatment outcomes. Individual results may vary. To be used only as directed.
